## Manulife Cash Management Fund

### Market review

US Treasury (UST) yields bear flattened October September 2021 as market players brought forward interest rate expectations; 2-year, 5-year and 10-year UST yields changed +22 bps, +22 bps and +6 bps, respectively. The weakness in bonds was due to more hawkish Fed as well as concerns over inflationary pressures.

Eurozone inflation surged to 4.1% year-on-year (yoy) in October amid persistent energy crunch. This was the highest reading since the Great Recession and almost doubled the 2.2% estimation provided by the European Central Bank (ECB) despite its chief Christine Lagarde had earlier insisted the inflation spike is largely transitory, bringing into question whether the ECB is behind the curve in containing the higher-than-expected inflation.

Malaysia Government Securities (MGS) sold off as well, in line with global bond movements. The 3-year, 5-year and 10-year MGS yields changed +25 bps, +27bps and +21 bps, respectively.

The Malaysia Government Securities (MGS) yield curve faced sell down as well during the month. 3-year, 5-year and 10-year MGS yields changed +25 bps, +27 bps and +21 bps respectively to close at 2.68%, 3.19% and 3.58%, reacting to higher inflation expectation as well.

### Market outlook

Concerns over inflationary pressures, tapering and rate hikes are expected to continue dominating headlines over the next couple of months. The worst of Covid-19 pandemic appears to be behind us, and many countries have made valiant efforts to step out of the pandemic and return to normalcy.

Within Malaysia, we expect economy reopening in 4Q 2021 to raise growth prospects meaningfully, which in turn increase prospects of OPR hikes in 2022. The expected economic improvement should also bode well for the country's credit market in general. There is a general improvement in the supply-demand dynamics for local bonds given that demand from pension funds have returned as withdrawal schemes come to a tail end.

Demand for bonds is also supported by the significantly cheaper bond prices after the recent bond selloff. Having said that, it remains difficult to turn bullish on the local bond market given that the macro backdrop is one of rising rates environment and tapering-induced receding global liquidity. Concerns over cost-push inflationary pressures also pressure bond yields upwards. In confluence, these factors tempered our outlook for local bonds despite cheaper valuation and more constructive demand. In the near-term, yield movements are likely to be influenced by regional and global factors, more so than local ones.

### Fund review and strategy

During the month, the fund return is in line with its benchmark performance. The Fund will continue to enhance fund return while maintaining adequate level of liquidity.

Based on the Fund's portfolio returns as at 30 Sep 2021 the Volatility Factor (VF) for the Fund is as indicated in the table above and are classified as in the table (source: Lipper). "Very High" includes Funds with VF that are above 17.285, "High" includes Funds with VF that are above 14.240 but not more than 17.285, "Moderate" includes Funds with VF that are above 10.840 but not more than 14.240, "Low" includes Funds with VF that are above 4.265 but not more than 10.840 and "Very Low" includes Funds with VF that are above 0.000 but not more than 4.265 (source: FIMM). The VF means there is a possibility for the Funds in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified Funds. VF and VC are subject to monthly revision or at any interval which may be prescribed by FIMM from time to time. The Fund's portfolio may have changed since this date and there is no guarantee that the Funds will continue to have the same VF or VC in the future. Presently, only Funds launched in the market for at least 36 months will display the VF and its VC.
